INSTRUCTIONS

1. Grind coffee — finer than pour over, but not close to espresso
2. Preheat Clever Dripper and rinse filter, but don't preheat the decanter
3. Weigh beans, spritz with water, and grind
4. Add freshly boiled water to Clever Dripper
5. Add coffee and stir to make sure all is mixed and no dry pockets remain
6. Steep for at least 5min (or 4min for darker roasts). Longer is fine, up to 8min — returns are diminishing.
7. Place ice (*see chart*) straight from the freezer into carafe
8. Strain coffee onto the ice
9. Once the brewer has drawn down and finished, stir in any remaining ice
10. Serve over new ice, add 2-3 drops of saline solution per 250mL liquid out, and enjoy
